Decrease

THE INSANE IN PUBLIC INSTITUTIONS.

Under the above heading the following institutions are included:—

A. — State institutions: —
Worcester Insane Hospital.
Taunton Insane Hospital.
Northampton Insane Hospital.
Danvers Insane Hospital.
Westborough Insane Hospital.
Worcester Insane Asylum.
Medfield Insane Asylum.
Asylum for Insane Criminals.
Asylum Wards, State Hospital.
Hospital for Epileptics.
B. — Municipal institution: —

B. — Municipal institution : — Boston Insane Hospital.

Admissions exclusive of transfers to such public institutions were, for the last hospital year, 1,270 men, 1,186 women, 2,456 total; for the preceding year, 1,280 men, 1,174 women, 2,454 total; variation this year from the preceding year, decrease 10 men, increase 12 women, increase 2 total.

The mean daily average number of patients resident in such public institutions during the last two hospital years is: 3,557 men, 3,789 women, 7,346 total. The percentages of the above admissions to this mean average number are: this year, 35.70 per cent. men, 31.30 per cent. women, 33.43 per cent. total; the preceding year, 35.98 per cent. men; 30.98 per cent. women, 33.40 per cent. total; variation this year from the preceding year, decrease .28 per cent. men, increase .32 per cent. women, a total increase of .03 per cent.

Thus it appears that the rate of admission of the insane has been practically the same for the last two years.

The elimination of duplicate cases does not materially modify the conclusion, inasmuch as the persons admitted were, last year, 1,251 men, 1,169 women, 2,420 total; the preceding year, 1,267 men, 1,155 women, 2,422 total; va-

riation this year from the preceding year, decrease 16 men, increase 14 women, decrease 2 total.

The admission rate is dependent in general upon the causes discussed in our report for the year 1900, pages 22-25. In addition, it should be greater in proportion to the growth of population and the increase of occurring insanity. Hence we are led to believe that the nearly stationary rate of admission for the last two years is exceptional, and that a more extended inquiry would show an increasing rate.

Discharges exclusive of transfers to such public institutions were, for the last hospital year, 1,094 men, 989 women, 2,083 total; for the preceding year, 1,054 men, 1,015 women, 2,069 total; variation this year from the preceding year, increase 40 men, decrease 26 women, increase 14 total.

The percentages of the above discharges to the mean average number resident in such institutions during the last two hospital years are: this year, 30.75 per cent. men, 26.10 per cent. women, 28.35 per cent. total; the preceding year, 29.63 per cent. men, 26.79 per cent. women, 28.16 per cent. total; variation this year from the preceding year, increase 1.12 per cent. men, decrease .69 per cent. women, a total increase of .19 per cent.

Thus, as in the case of admissions, the rate of discharge has been practically the same for the last two years.

The elimination of duplicate cases does not materially alter the result, inasmuch as the persons discharged were, last year: 1,087 men, 985 women, 2,072 total; the preceding year, 1,043 men, 1,012 women, 2,055 total; variation this year from the preceding year, increase 44 men, decrease 27 women, increase 17 total.

The discharge rate is determined by: —

A. — Factors dependent upon patients, their friends or the hospital authorities, namely: the number of patients whose mental condition, although not normal, might allow their discharge; the disposition and ability of friends to receive and provide for their care outside of an institution; the zeal of hospital authorities in urging or permitting discharge of such patients.

- B. Factors independent of the above, namely: -
- (1) Recoveries.
- (2) Deaths.
- (3) Removals by the overseers of the poor.
- (4) Removals out of the State.
- (5) Removals for boarding out.

The operation of these factors for the past two years and their relative effect upon discharge rate are shown in the following tabulation: -

† Decrease.

ACCUMULATION OF THE INSANE IN PUBLIC INSTITUTIONS.

The insane in public institutions (A and B in preceding tabulations) numbered, on Oct. 1, 1901, 3,779 men, 4,011 women, 7,790 total; on the same date, a year ago, 3,603 men, 3,814 women, 7,417 total; showing increases for the year of 176 men, 197 women, 373 total. Corresponding increases for the year preceding were: 226 men, 159 women, 385 total; variation this year from last year, decrease 50 men, increase 36 women, decrease 12 total.

The average annual increase from 1890 to 1895 was 219.8; from 1895 to 1900, 377.6; since Sept. 30, 1890, 305.4. It thus appears that this year's increase was 153.2 more than the average from 1890 to 1895, 4.6 less than from 1895 to 1900, and 67.6 more than the average since Sept. 30, 1890, and 12 less than the increase last year.

The accumulation of the insane in such institutions might be due to an increasing admission rate, a decreasing discharge rate, both together, or, such rates being stationary, to a constant relation between admissions and discharges each year, such that the outflow of patients would be habitually less than the inflow.

In the preceding discussion of admissions and discharges (pp. 22 and 23) these rates are shown to have been practically stationary during the last two years; that is, for admissions in 1901, 33.43 per cent. of the mean average number of patients resident; for 1900, 33.40 per cent.; for discharges, 1901, 28.35 per cent.; for 1900, 28.16 per cent. This is consistent with the known fact that the accumulation of the insane for these years is practically the same; that is, 373 in 1901, 385 in 1900.

Therefore, for the last two years the accumulation of the insane in institutions has been almost entirely due to the fact that the discharges have been less than the admissions; thus, 2,456 admissions in 1901, 2,083 discharges, 373 less; 2,454 admissions in 1900, 2,069 discharges, 385 less.

Such general relation of admissions and discharges is undoubtedly constant and important as a causative factor in the accumulation of the insane in institutions; but an increasing

admission rate must also be auxiliary, as would appear upon more extended examination.

In this connection an analysis of the tabulation of discharges and their causes (p. 25) reveals some interesting facts, which are worthy of further investigation and suggestive of certain lines of effort.

On the average for the past two years the outflow of patients from public institutions has been determined by:—

- 1. Recovery, in 1 out of every 4.91 discharges, or 5.75 per cent. of the mean daily average number of patients resident.
- 2. By death, in 1 out of every 2.72 discharges, or 10.12 per cent. of such average.
- 3. By removal by public authorities outside of the hospital, in 1 out of every 8.65 discharges, or 3.26+ per cent. of such average.
- 4. By combination of the above, 1 out of every 1.48 discharges, or 19.13 + per cent. of such average.
- 5. By friends of unrecovered patients, in 1 out of every 3.98 discharges, or 9.12 per cent. of such average.

Although these ratios, pending confirmation, do not warrant a final conclusion, they excite such queries as these:—

Is such low recovery rate the inevitable outcome of mental disease?

Are adequate measures being taken for the cure of the insane?

Is a mortality rate of 1 in every 10 of the insane population in public institutions, compared with 1 in every 56 in the general population of the State, the necessary accompaniment of insanity, or is it chargeable in part to the long continuance of overcrowding in such institutions?

Does the fact that, out of every 4 discharges of unrecovered patients, only 1 is made at the solicitation of friends or on the recommendation of hospital authorities, signify that their condition permits only such small proportion to be returned to life in the community, or is insufficient effort being made to assist or induce friends to receive them?

Overcrowding in public institutions is greater than a year ago by 176 men, 197 women, 373 total, inasmuch as the

additions to present hospital buildings which have been authorized by the Legislature and for which appropriations have been made are not yet ready for occupancy, although good progress is being made toward that end. These will be completed probably during the coming year, and will afford accommodations as follows:—

		Men.	Women.	Total.
At the Worcester Hospital,		_	60	60
Taunton Hospital,			55	- 55
Northampton Hospital,		_	85	85
Danvers Hospital,		40	-	40
Westborough Hospital,		100	_	100
Medfield Asylum,	.	30	70	100
Asylum for Insane Criminals,	.	22	_	22
Asylum Wards, State Hospital,	.	100	_	100
Hospital for Epileptics,		50	50	100
Total,		342	320	662

Hence, at the end of another year, after allowing for an increase of the insane at a rate equal to that of this year, overcrowding will be lessened by about 166 men, 123 women, 289-total. Nevertheless, it will still be excessive, as will be seen from a census taken on Oct. 20, 1901, which showed that 192 or 5.12 per cent. of men, 385 or 9.58 per cent. of women, 577 or 7.43 per cent. of all patients in public institutions, were sleeping on beds set up permanently in spaces originally intended for day use; that 425 or 11.33 per cent. of men, 535 or 13.32 per cent. of women, 960 or 12.36 per cent, of all patients, were sleeping on beds set up in such spaces each night and removed each morning, notwithstanding the conversion of single into double rooms to a considerable extent, and an excessive number of beds in dormitories. The adverse consequences of such conditions from a hygienic stand-point, the danger of spreading contagion in time of an epidemic, the increased interference of patients with each other and consequent excitement, the greater tax upon the time of nurses and the destructive effects on buildings, are too apparent to need comment.

Therefore we recommend that appropriations be made this year by the Legislature to provide for an increase of about 375 patients, and the relief of overcrowding by about 100 patients, or a total of about 475 patients.

Moreover, the beginning of State care on Jan. 1, 1904, will require still further provision, although its introduction may be gradual, according to a plan hereafter to be considered.

GENERAL PRINCIPLES OF EXTENSION OF PROVISION.

For the present, such extension of provision should be made in connection with existing institutions. This would enable each to perfect and add to its facilities for doing its distinctive work, allowing steady and gradual progress to be made by each, without too great interference with fixed duties and with a just recognition of the claims of all. Close supervision and careful planning to meet specific needs could be had from permanent and experienced boards of trustees and superintendents, ensuring the best results with the most economical expenditure.

Emphasis should be laid upon the advisability of first meeting the present requirements of each institution for doing its special work in the most enlightened manner. Simple enlargement of existing plants without adding new facilities for classification and treatment should be left an open question for the present.

The present system of State care of the insane recognizes their classification roughly into three main groups, viz.:—

- (a) The acute and curable insane.
- (b) The chronic insane of the custodial class, who require strict supervision and restraint for the protection of themselves or the public, and those of the infirmary class, both of which classes are suitable for care on a plan having a compact arrangement of buildings.
- (c) The colony class of chronic, able-bodied insane, who are competent, or may be taught, to do some useful work toward self-support, and can safely be allowed greater liberty and more homelike conditions.

These classes represent the distinctive work of three

types of institutions: the hospital (a), the asylum (b) and the colony (c). While each type differs materially from the other in its functions, kind of officers and organization, so that it might seem theoretically desirable to keep each absolutely distinct from the other, present conditions and practical considerations render it impossible.

The hospitals receive all commitments by the courts or otherwise, and consequently have all classes of patients. They have become large institutions, accommodating on the average about 800 persons. Of these, only about 7 per cent, are acute and curable, while 93 per cent. are chronic and incurable, — that is, asylum and colony cases. It is apparent, therefore, that the hospitals cannot be converted into purely curative institutions, on account of the relatively small percentage of curable patients. On the other hand, the claims of locality, which require the treatment of patients as near their friends as practicable, forbid the aggregation of the curable class in any one hospital. Furthermore, the friends of a certain proportion of asylum and colony cases demand provision for them in their present locations on account of their proximity. Each institution, also, has need of workers on its wards, in industrial departments and on its farm, and for economical reasons their removal would be inadvisable within the limits of such requirement.

Therefore the care and treatment of curable insanity should assume the first importance in the hospitals, but custodial and infirmary functions must continue to be large and colony work advisable so far as economic considerations and demands for local provision require.

The asylums receive by transfer from the hospitals only chronic and incurable patients, who are chiefly of the disturbed and infirm classes. However, with abatement of excitement, a fair proportion of them become helpful workers, and others may be developed into such by suitable training. Hence, the curative work of the hospitals is eliminated in the asylums, but their custodial, infirmary and colony functions are identical.

The colony, like the asylums, will receive only chronic and incurable patients, but they will be of the quiet and able-bodied class. This, however, will not be a constant condition. Some will become disturbed and must be cared for during the continuance of temporary excitement, others will become acutely ill and others enfeebled by age or disease; so that the colony will be compelled to do an increasing amount of custodial and infirmary work, although its distinctive features will be the utilization of intelligent labor, the training of demented patients into workers, and the establishment of homelike conditions so far as possible.

Present provision for the insane affords a relative excess of accommodation for the custodial class, for which buildings are massive and expensive in construction. Consequently such space is now occupied by a considerable number of quiet and mild patients and by nurses, both of whom might be better provided for in cheaper buildings. Therefore they should be gradually withdrawn into separate institutions, or buildings in connection with those now existing, which may be less costly in construction, equipment and organization than is required to do curative or custodial work.

### Special Provision recommended.

In accordance with the principles above enunciated, the Board advises a continuance of the policy instituted last year, namely:—

- 1. Development of the State colony each year to provide for about 100 patients.
- 2. Erection of buildings for working patients at each institution.
- 3. Provision for nurses, both men and women, outside of the wards and in separate buildings so far as practicable.
- 4. The addition of infirmary wards, as an extension of present buildings or as separate infirmaries.

Such additions will afford material relief of overcrowding, and some improvement in classification of patients and facilities for doing particular kinds of work; but a further advance in specializing the functions of the hospitals and asylums for the insane scems imperative. The most pressing needs in this respect relate to the acute, curable insane and to the excitable patients of the chronic class.

#### THE ACUTE, CURABLE INSANE.

Early and efficient treatment of the acute, curable insane puts the most effectual check upon the increase of insanity, because thus the largest possible number may be restored to sanity, brain damage may be minimized, and its remote consequences through heredity ameliorated. Acute insanity at the best is a most deplorable condition, and affects all grades of society. Its course is so long and the expense involved so great that comparatively few families can bear it without impoverishment; hence, care in a private institution or at home, even if the required skilled attendance were available, is rendered impossible in a great majority of cases.

To these the large State hospital for the insane alone is open. Here they are away from friends, deprived of home comforts, occupations and diversions. They require not only medical attendance and good nursing, but an environment which is congenial and hopeful. Under present conditions they are admitted into large wards and unavoidably brought into contact with 30 or 40 other patients, some of whom are chronic. Every effort is now made in the hospitals to gather such acute cases into special wards and to give them the best possible surroundings; but it is impossible to remove them from the influence of the chronic insane or to classify them in small groups according to their needs. Therefore the first requisite in the treatment of the acute, curable insane would seem to be their separation from chronic patients and their distribution in small groups.

Furthermore, they constitute only a small proportion of the insane, probably less than 7 in every 100 of the patients in our insane hospitals at any one time. By actual enumeration, on Nov. 1, 1899, there were only 317 acute, curable cases, in the judgment of the superintendents, in a total of 6,088 insane persons in Massachusetts public institutions. Each of the five State hospitals had an average of 55.6 such patients.

It must be admitted that the standard of care for these patients should rise above that which is *necessary* for any other class. It is not unreasonable to believe that their

present intimate association with the mass of chronic cases which fill our hospitals tends to lower the standard of care and treatment of the few acute, and to raise it above what is required for the many chronic. Would not their separation effect a saving in care of the latter which would partially compensate for an increased expenditure in behalf of the former? But, whatever the result, this is necessarily the expensive work of a hospital. The best that present knowledge affords is demanded, and no compromise in such work can be accepted.

Finally, the rapid progress in other branches of medical science and the vast importance to the public of a better knowledge of insanity do not permit alienists to be behind in the clinical study and scientific investigation of mental affections. For such purpose there are needed adequate room and equipment, thoroughly trained physicians and nurses, and conditions of work allowing greater individuality than is now possible in so intimate relation to the complex organization of a great hospital.

Such a problem cannot be solved at once, nor without due consideration of the conditions at each of the State hospitals, but the Board suggests it for thought and discussion, and hopes that eventually each of the five State hospitals for the insane will effect a practical separation in environment of the acute, curable insane from the incurable; that each will establish a strictly hospital unit, apart in its location and independent in its operation, except as supervised by a common board of trustees and a general medical superintendent, and that such unit will afford to the patient suffering from acute insanity as enlightened care and treatment as any general hospital can furnish to those afflicted with other acute diseases. Such provision would be in harmony with the progress being made in this direction in other States and countries.

## CERTAIN CHRONIC, EXCITABLE PATIENTS.

Under this head reference is made to the more troublesome of excitable patients, who require close watchfulness on account of restlessness, noise, violent or destructive tendencies, meddlesomeness and general unreliability. They number perhaps 50 to 100 in each of the State institutions, and are found in one out of every three or four wards having 30 to 50 patients each. Their characteristics often render it impracticable to take them to the daily walks with other patients. Sometimes they are secluded in their rooms or mechanically restrained. They are a source of disturbance to quiet patients. On account of excitability and meddlesomeness, they need more room than the average patient, and should be distributed in smaller groups. Being frequently deprived of outdoor exercise, they should have ready access to ample veranda space and thus to the fresh air.

Accordingly, we recommend, in connection with each asylum and asylum part of the hospitals, provision for these patients in wards accommodating not more than 15 to 20 patients, with ample verandas for outdoor exercise, of such area that interference with each other would be least likely, and so located that quiet patients would be least disturbed.

## THE FEEBLE-MINDED.

According to the Massachusetts census of 1895 there were then in the State 1,868 persons classed as idiotic. Obviously the number must be larger now. About 500 such are at the present time inmates of city and town almshouses, and about 50 are boarded in private families by overseers of the poor. Undoubtedly many feeble-minded children are living in homes where they are neglected, idle, and forming vicious habits. Continuance of these conditions will lead to their permanent dependence upon public support, whereas suitable training would convert many of them into useful and partially self-supporting patients in an institution.

The School for the Feeble-minded at Waverley is the only institution in Massachusetts which affords adequate training and supervision for these unfortunates. On Oct. 1, 1901, it had 422 male inmates, 280 female, a total of 702. The utmost limit of its capacity has been reached. Since 1892, 2,219 applications have been made for admission, of which 914 have been accepted, 1,305 rejected on account of insufficient accommodation. Pressure for admission has

been so great that appeals have been made to the Governor and frequently to this Board. It has usually been necessary to deny them because of lack of room, although they would have been granted on their merits. Moreover, such children are sometimes committed to the insane hospitals, because their need of care is so great, and no other place can be found for them.

The necessity for further provision for this class seems urgent. The Board recommends the immediate erection of additional buildings in connection with the School for the Feeble-minded at Waverley. The Board has conferred with the trustees of the school, and has been assured of their co-operation in carrying out this recommendation.

# Support of Patients in Public Institutions for the Insane.

The Board has investigated the propriety of commitment in 100 consecutive cases of old people admitted to such institutions during the year, and in each case has endeavored to determine the financial ability of persons legally liable for support. In 16 cases persons were found who are legally liable and able to assume it; in 9 cases there is no reasonable doubt that payment could be enforced.

Inasmuch as these may have been exceptional cases (although taken in consecutive order), and as unforeseen difficulties probably would have been encountered in attempting enforcement, the proportion of successful collections would very likely be smaller than thus indicated. Nevertheless, the investigation tends to show that the support of a considerable number of public charges would be assumed by private persons if systematic and persistent effort were made in this direction.

The possibilities of such relief to the public treasury appear when attention is directed to the large number of patients in public institutions for the insane, and the meagre percentage of private maintenance. The whole number of such patients on Oct. 1, 1901, was 7,946. If no account be taken of reimbursements, 5,198 or 65.4 per cent. were supported by cities and towns, 2,103 or 26.5 per cent. by the State, and only 645 or 8.1 per cent from private sources.

The number of public charges was 7,301, who were cared for at an average weekly per capita cost of \$3.22. Support at this rate for one year would amount to \$167.44 for each patient, or—

```
$12,224.68 for 1 per cent. (73.01 patients) of public charges. 24,449.36 for 2 per cent. (146.02 patients) of public charges. 36,674.56 for 3 per cent. (219.03 patients) of public charges. 48,899.24 for 4 per cent. (292.04 patients) of public charges. 61,123.40 for 5 per cent. (365.05 patients) of public charges.
```

These considerations and the nearness of State support of all the insane poor lead the Board to recommend, relative to each commitment to a State hospital for the insane, a thorough examination as to the financial ability of persons legally liable for support, and the adoption of appropriate measures to secure payment therefor whenever such a course is justifiable.

#### SUMMARY OF RECOMMENDATIONS.

The recommendations of the Board may be summarized as follows:—

- 1. That provision be made, in connection with existing institutions, for an increase of the insane of 375 patients, and the relief of overcrowding by at least 100 patients (p. 29).
- 2. That the State Colony for the Insane be developed each year to provide for about 100 patients (p. 31).
- 3. That buildings for working patients be erected at each institution (p. 31).
- 4. That provision for nurses, both men and women, be made outside of the wards and in separate buildings so far as practicable (p. 31).
- 5. That infirmary wards be provided at each institution, either as an extension of present buildings or as separate infirmaries (p. 31).
- 6. That a small, acute hospital be erected at each of the five State hospitals for the insane (p. 32).
- 7. That special buildings for excited patients be constructed at each institution (p. 33).
- 8. That additional buildings be immediately erected at the School for the Feeble-minded at Waverley (p. 34).

#### ESTIMATES FOR APPROPRIATIONS.

The Board is required to embody in its annual report a properly classified and tabulated statement of its estimates for appropriations for the ensuing year, and of the estimates for special appropriations to the State institutions under its supervision, with its opinion as to the necessity or expediency of appropriations in accordance with such estimates, in compliance with the provisions of section 4, chapter 87, Revised Laws, namely:—

The report shall contain a properly classified and tabulated statement of the receipts and expenses of the board, and of each of the several state institutions under its supervision for said year, and a corresponding classified and tabulated statement of their estimates for the year ensuing, except estimates for the ordinary expenses, with its opinion as to the necessity or expediency of appropriations in accordance with said estimates.

#### Estimates by the State Board of Insanity.

APPROPRIATIONS, - FOR WHAT REQUIRED.	Esti- mates for 1902.	Amounts appro- priated for 1901.	Increase or Decrease.	Citation of Statute Provisions relating to Expenditures.
Travelling and office expenses, Salaries of officers and employees, . Transportation and medical examination of State paupers, . Snpport of insane paupers boarded ont in families, . Support of State paupers in the Hospital Cottages for Children, .	\$5,000 16,200 \$,500 10,000 6,000 \$45,700	\$5,000 14,700 - \$,500 8,000 22,000‡ \$58,200	Increase of \$1,500.*  Increase of \$2,000,†	Chapter \$7,

<sup>\*</sup> The increase of \$1,500 in the appropriation for salaries of officers and employees is required for the salary of an additional officer.

## Estimates for Appropriations to Institutions.

The Asylum for Insane Criminals does not ask for any special appropriation this year.

The needs of the other institutions are set forth in their annual reports, and require no further description here.

<sup>†</sup> The increase of \$2,000 in the appropriation for the support of insane paupers boarded out in families is required for the support of an increased number of boarded-out State patients.

i Included the support of the same class of cases in the School for the Feeble-minded.

The State Board has considered carefully the reasons for the appropriations desired, and in the main agrees with the trustees, and advises carrying out their recommendations, with the following modifications:—

## Worcester Insane Hospital.

Additional Appropriation for Nurses' Home. — A careful examination of the plans, specifications and estimates for this building, as submitted by the trustees, convinces the State Board that the present appropriation will be sufficient, without cheapening the quality of the work, if the rooms are made smaller, the area of corridor space reduced and plumbing centralized.

Electric Lighting. — The State Board approves electric lighting in institutions for the insane, but considers more urgent at the present time the need of relieving overcrowding and making additional provision for the increasing accumulation of the insane. It therefore advises postponement of this improvement.

However, the Board understands that there is immediate need of more power in new industrial rooms, and that the present engine is old and liable to break down at any time. It is desirable that such need should be met in connection with a central electric lighting and power plant sufficient for the entire institution, and in such way that no work will have to be undone when the time arrives for adding electric lighting to the power plant. It is therefore desirable to enlarge the present boiler house and to make such alterations in the engine room as will afford sufficient space for the completed plant, and that sufficient power equipment should be purchased and installed this year as will meet the immediate need. The estimate for such portion of the work is \$16,000, and the appropriation of this sum is recommended by the Board.

Mortuary. — The State Board understands that it is desired to erect in the rear of the present hospital a one-story building, 45 by 61 feet on the foundation. The Board approves of such a building at an expense not exceeding \$10,000.

## Worcester Insane Asylum.

Addition and Alterations in Kitchen, Bakery and Store Room Building. — These changes are necessitated by the gradual enlargement of the asylum. After consultation with the superintendent, it has been agreed that \$23,500 will be sufficient to do the work.

Additional Land. — For reasons already stated in this report, it is desirable that this asylum should be gradually extended. It is located in the midst of the city of Worcester, so that without the purchase of more land such extension is impossible. The trustees have conferred with the State Board, and both recommend that \$25,000 be appropriated for this purpose.

# Danvers Insane Hospital.

Buildings for 300 Women Patients of the Colony Class. — The State Board understands that it is desired to erect near the present institution four detached buildings, arranged in a rectangle about a central kitchen and dining room building. to provide for 300 women patients of the quiet, able-bodied, chronic class. The Board believes that such patients, who constitute the colony class, should be cared for at a greater distance from the parent institution, under conditions which would allow greater freedom, more homelike conditions, more varied classification and fuller occupation. It will be necessary for each hospital to provide for this class so far as the claims of its locality, its need of working patients and economy of administration require. In doing this, the Board would advise that additional land be purchased at a convenient distance from the present plant, where a sufficient acreage may be purchased at a reasonable rate. On account of the claims of other institutions which are equally overcrowded, it is hardly equitable to build for 300 patients at one time at any one institution. The State Board recommends that an appropriation be made for no more than 100 patients this year. Inasmuch as this class of patients can live in inexpensive buildings, it believes that \$500 per capita will be sufficient for constructing, furnishing and equipping buildings for their care.

The above and other recommendations for special appropriations are classified in the tabulation following:—

Institutions.	Objects.	Amount recom- mended by State Board.
I. — Insane. Worcester Hospital,	Enlarging boiler house; alterations in engine room; equipping with new boilers, engines, dynamos and motors.	\$16,000
	Mortuary,	10,000
	•	\$26,000
Taunton Hospital,	Purchase of Leonard estate; repairing and furnishing the old buildings for 20 male patients.	\$7,50
	Construction of a new barn and silo at the Raynbam farm and equipping the same; repairing two old barns and building a carriage house.	8,80
	Enlarging bakery and building new oven,	3,20
	Building a house and cellar for storing vegetables.	1,00
	Painting the external woodwork of the entire institution.	3,00
	Purchase and installing laundry machinery, kitchen apparatus, and laying new floor in kitchen and back space.	1,80
	Purchase and installing telephones,	62
		\$25,92
Northampton Hospital,	Purchase and installing new boiler and ma- chinery for carpenter and machine shops.	\$3,50
Danvers Hospital,	Renewal and repair of plumbing in front and rear centre buildings.	\$3,00
	New floor and repairs in basement,	2,50
	Repairs in old laundry rooms; enlarging and repairing kitchen; resetting, renewing and adding kitchen apparatus.	3,00
	Alterations and repairs in seed bouse and farm house, to accommodate 20 male patients.	3,50
	New ice house,	1,60
	Completion of repairs on outside of buildings,	2,50 1,20
	Electric motors,	
		\$17,30
Westborough Hospital,	Constructing and furnishing buildings to provide for 100 insane women.	\$50,00
	The purchase of a new boiler, and alterations in heating system to utilize exhaust steam.	
	Extension of present sewerage system to provide for the disposal of sewage from the new buildings, and the purchase of necessary apparatus.	8,00
	Alterations in main building, to provide suitable rooms for pathological and surgical work.	5,00
		\$68,00

Institutions.	Objects.	Amount recom- mended by State Board.
Medfield Asýlum,	Constructing and furnishing a building for 100 excited women patients.	\$80,000
	Additions and alterations in laundry building, and installing of necessary laundry machinery.	8,000
	Addition to cow barn,	8,000
	Extension of pipes of sewer beds and masonry,	500
	Cement walks,	800
	Underground electric cable from power house to nurses' home, and thence overhead to farm house and barn.	2,000
	-	\$99,300
State Hospital at Tewksbury, .	Constructing and furnishing, ready for use, a building for 100 insane women patients.	\$60,000
Worcester Asylum,	Addition and alterations in kitchen, bakery and store room building.	\$23,500
	Acquiring additional land,	25,000
		\$48,500
Hospital for Epileptics,	Purchase and installing of a new boiler, elec- tric generators, engines, motors and other necessary electrical apparatus.	\$19,000
	Constructing and furnishing a new building to accommodate not less than 40 nurses.	20,000
	accommodate not less than 40 nuises.	\$39,000
State Colony for the Insane, .	Constructing, furnishing and equipping bulldings providing reception and infirmary wards, offices for general administration, and for other work necessarily connected with their occupancy.  (The trustees of this colony have been recently appointed, and on this account have not had time to mature definite plans for buildings. It is, however, important that they should begin work immediately. The State Board would therefore recommend the appropriation of this sum at the earliest date possible.)	\$100,000
II. — Other Classes.		
Hospital for Dipsomanlacs, .	The purchase and installation of an additional electric generator and engine, with the necessary equipment, electric motor for laundry and changes in exhaust and drip pipes.	<b>\$6,</b> 000
School for the Feeble-minded,	Additional land, 55 acres (approximate),	\$34,000
	Dormitory for 100 inmates,	40,000
	Dormitory for 80 inmates,	27,000
	Addition to electric plant,	2,000
	Additional appropriation for addition to admin-	4,000 15,000
	istration building. Furnishing,	7,200
	(If the whole sum should be approved, and \$75,000 appropriated this year and the remainder early next year, prosecution of the work would not be retarded.)	\$129,200

Summary of Appropriations recommended.

#### REVIEW OF THE YEAR.

# New Legislation.

General legislation relative to the institutions and persons under the supervision of the Board of Insanity was enacted by the Legislature of 1901, as follows:—

#### [Acts of 1901, Chapter 303.]

An Act relative to the expenditures of certain state institutions.

Be it enacted, etc., as follows:

Section 1. An annual appropriation shall be made for the support of each of the state insane hospitals and insane asylums. the Massachusetts hospital for dipsomaniacs and inebriates, the Massachusetts hospital for epileptics, the Massachusetts state sanatorium, and the Massachusetts School for the Feeble-minded; and the amount of the appropriation shall be determined by estimating, at the rate of board fixed by law, the cost of the average daily number of state patients for the year next preceding, increased by a number equal to the average annual increase in the number of such patients for the five years next preceding, in each of said institutions; and a statement showing said average number and said annual increase in number shall be submitted to the auditor by the trustees of each of said institutions on or before the fifteenth day of December in each year. The salaries and wages of all officers and employees and all bills for supplies and other expenses of said institutions shall be paid from the treasury of the Commonwealth, upon detailed schedules sworn to by the superintendent and approved by the trustees. copies of the pay rolls and bills shall be kept at each institution, but the originals shall be deposited with the auditor as youchers.

Section 2. All moneys received from cities and towns or from individuals for the support of inmates in said hospitals, asylums or other institutions, and moneys received for articles sold therein, shall be paid into the treasury of the Commonwealth as often as once in each month; and so much of said receipts as may be needed to pay the expenses of said institutions is hereby appropriated for that purpose, and any excess of receipts above expenditures remaining in the treasury of the Commonwealth may be used for the expenses of the succeeding year: provided, that payments of said expenses shall be allowed by the auditor only

upon schedules duly certified and approved, as required by section one hereof, and that the receipts from any one of said institutions shall be applied to paying the bills at that institution only.

Section 3. There may be advanced to the treasurer or disbursing officer of any one of said institutions, under the provisions of chapter one hundred and seventy-nine of the acts of the year eighteen hundred and eighty-four, and of acts in amendment thereof and in addition thereto, a sum not exceeding two thousand dollars for an institution having five hundred or less inmates, and a sum not exceeding five thousand dollars for an institution having more than five hundred inmates.

Section 4. Nothing in this act shall be construed to affect the powers of the trustees of said institutions under the provisions of section five of chapter eighty-seven of the Public Statutes and chapter one hundred and fifty of the acts of the year eighteen hundred and fifty, and acts in amendment thereof, nor their right to regulate or control the expenditure of any funds held by them under the provisions of said acts.

Section 5. This act shall take effect on the first day of January in the year nineteen hundred and two. [Approved April 23, 1901.

#### [ACTS OF 1901, CHAPTER 282.]

An Act relative to the commitment of women subject to dipsomania or inebriety.

Be it enacted, etc., as follows:

Section 1. The proceedings on the commitment of women afflicted with or subject to dipsomania or inebriety to any state hospital or institution shall be in accordance with the provisions of chapter three hundred and thirty-nine of the acts of the year eighteen hundred and eighty-five, of chapter four hundred and fourteen of the acts of the year eighteen hundred and eighty-nine, and of chapter two hundred and sixty-six of the acts of the year eighteen hundred and ninety-nine, and of all acts in amendment thereof and in addition thereto: provided, however, that this act shall not be construed to authorize the commitment of women to the Massachusetts hospital for dipsomaniacs and inebriates.

Section 2. All acts and parts of acts inconsistent herewith are hereby repealed.

Section 3. This act shall take effect upon its passage. [Approved April 11, 1901.

Special Appropriations, 1901.

			PERSON	PERSONS ACCOMMODATED.	ODATED.
Institutions.	Objects.	Sums appropriated.	Men.	Women.	Total.
I.— Insans. Worcester Hospital,	For constructing, furnishing and equipping a building sufficient for the accommodation of 60 nurses (Acts, chapter 471).	\$45,000	ı	09	09
Taunton Hospital,	For constructing, furnishing and equipping a building sufficient to accommodate not less than 55 nurses (Acts, chapter 471).	\$39,000		55	55
Northampton Hospitai,	For infirmary and nurses' home,	\$55,000	•	82	82
	For hay barn, cow stable, sile and equipment with ensilage cutter, grist mill and motor.	16,000			
	For connecting present sewerage system with system of Northampton	3,000			
	יישרים מחשבים ביש"י	\$74,000			
Danvers Hospital,	For a building for patients engaged in farm work,	\$25,000	07		40
	For a detached building for surgical operations,	5,000			
	For rebuilding greenhouses,	3,000			
	For putting fire-escapes on the dining hall (Acts, chapter 471),	1,000			
	To provide for scales, and for a subway and platform for the disposal of ashes.	2,500			
	For pointing and painting the outside of buildings, and renewing woodwork and sashes, repairing sunrooms and providing storm doors and porches (Resolves, chapter 82).	7,500			
		\$44,000			

Special Appropriations, 1901 — Concluded.

			PERSON	PERSONS ACCOMMODATED.	DATED.
INSTITUTIONS.	Objects,	priated.	Men.	Women.	Total.
Westborough Hospital,	For the purchase of land, buildings and chattels thereon, the construction of new buildings and repairs and alterations of existing buildings sufficient to accommodate not less than 100 patients.	\$50,000	100	,	100
	For the construction of an ice house (Acts, chapter 471),	1,600			
	For painting the interior walls of the Talbot building (Acts, chapter 471),	1,000			
	For enlarging a ward dining room, fencing land, paying the cost of a heater in Stanley house, and for the purchase of live stock and laundry machinery (Resolves, chapter 78).	1,900			
	For new boilers and setting the same (Resolves, chapter 78),	3,500			
		\$58,000			
State Hospital,	For furnishing, heating and lighting the new asylum building (Acts, chapter 471).	\$10,000	-		
State Form,	For erecting a detached building, including heating, lighting and furnish- ing, to accommodate not less than 25 attendants and employees (Acts, chapter 471).	\$15,000	72	ı	25
Medfield Asylum,	For erecting and furnishing a sultable building for a nurses' residence (Acts, chapter 446).	\$50,000	1	70	70
Hospital for Epileptics,	For furnishing the new building recently erected,	\$20,000		-	

	For the erection of a laundry building and for placing therein sultable machinery.	009'6
	For painting (Acts, chapter 447),	1,000
		\$34,000
II. — Other Classes.  Hospital for Dipsomaniacs,	For the construction of a building for workshops,	\$2,500
	For addition to piggery,	009
	For the purchase of land (Resolves, chapter 61),	450
		\$3,550
School for the Feeble-minded,	For making additions to and alterations in the laundry, hospital and administration buildings (Resolves, chapter 31).	\$25,000

(b) Average per capita cost, \$641 38	
2. Land; buildings for administrative purposes, includ-	
ing furnishings and equipment; improvements	
and repairs,	88,550

<sup>\*</sup> Includes \$30,000 for the furnishing, etc., of buildings for which appropriations were made in 1900.

#### THE STATE BOARD.

The purchase of land for the State Colony for the Insane was made a duty of the Board by section 3, chapter 451, Acts of 1900, namely:—

The state board of insanity is hereby authorized, with the approval of the governor and council, in the name and behalf of the Commonwealth, to take, by purchase or otherwise, a tract of farming or other land, suitable in its judgment for the establishment of a receptacle for the care, custody and control of the insane. Said tract shall consist of not less than fifteen hundred nor more than twenty-five hundred acres, and may include buildings or other chattels thereon.

Search for a suitable location was begun immediately after the passage of the act, and in December, 1900, a very desirable site was selected in the town of Rutland, where about 1,600 acres of land were bonded by the Board. Although this acreage is now outside of the limits of the metropolitan water district, consultation with the State Board of Health revealed the probability of future extension of the district to include it. In such event, the proper disposal of sewage from the colony, with its numerous and scattered groups of buildings, would have involved great expense and some interference with its development. Under these conditions, it did not seem advisable to complete the purchase.

Similar objections, arising out of the probable extension of the metropolitan water district to include the basins of the Assabet, Ware and Swift rivers, greatly restricted the Board, and increased its difficulties in selecting a site with good railroad facilities, and caused unexpected delay in the establishment of the colony. Finally, however, a tract of land was found in Gardner, Westminster and Ashburnham, which met the approval of the Governor and Council and the State Board of Health, and is eminently suitable for the purposes of the colony.

It consists of 1,500 acres of land, extending within about 2½ miles of Gardner depot on the west and less than a mile from Ashburnham Junction on the north. The main line

of the Fitchburg railroad runs through it, along which side tracks can be easily built. Its surface is uneven, affording numerous good building sites, which rise to elevations of 1,000 to 1,200 feet above sea level and surround a central basin several hundred feet below, into which the sewage from any part may be easily carried. A small stream with a good mill privilege flows through the property.

Although much of the land is rough and rocky, the soil is good and several hundred acres can be quickly brought under cultivation. There are excellent pastures, much standing wood and timber and numerous fruit trees. Five sets of old buildings can be temporarily used, but will be of little permanent value.

The property was held by twenty-five different owners, under forty separate titles, of which the records and descriptions were so defective and indefinite that much labor was involved in looking them up. It was found that a clear title to much of the property could be had only by exercising the right of taking by eminent domain, provided for in the act authorizing the purchase. This necessitated making, at considerable cost, a survey and map of the whole tract.

The preliminary steps to this end have been taken. It is confidently expected that the formal taking of the property will be completed in time to allow the board of trustees to begin their service on the first Wednesday of February, 1902.

There remains a small balance of the appropriation of \$25,000, with which more land will be acquired.

Stated meetings of the Board have been held on the second Wednesday of each month, and in addition fifteen special meetings.

Visits of inspection have been made to the different institutions by the Board, and in addition by its executive officer and deputy executive officer to the number of 123.

Twenty-two special investigations have been made with reference to the commitment, mental condition or treatment of patients in institutions, almshouses or private families, at the request of various persons interested.

In compliance with section 7, chapter 87 of the Revised

Laws, namely, "The board shall inspect and approve all plans and specifications for new buildings which are to be used by the Commonwealth as institutions coming under the supervision of the board, and for the extension or alteration, involving an expenditure of more than two thousand dollars, of existing buildings which are to be or are already so used, before such new building is erected or such extension or alteration is made," the Board has examined and approved plans and specifications as follows:—

Nov. 28, 1900. — Medfield Asylum: A farm building, provided for in chapter 52, Resolves of 1899; a new filtration area of about two acres, expense to be met out of current income.

Feb. 13, 1901. — State Hospital: An asylum building, provided for in chapter 70, Resolves of 1900.

June 26, 1901. — Westborough Hospital: An addition to and alterations in the old farm house upon the estate recently purchased, to provide for 32 patients, as provided for in section 2, chapter 471, Acts of 1901.

Danvers Hospital: A farm house and a surgical building, provided for in section 2, chapter 471, Acts of 1901.

July 10, 1901. — Hospital for Epileptics: A new laundry building, provided for in section 1, chapter 447, Acts of 1901.

July 31, 1901.—Hospital for Dipsomaniaes: A new workshop and an addition to the piggery, provided for in chapter 61, Resolves of 1901.

Worcester Hospital: Additions and alterations in the laundry building and boiler house, expense to be met out of current income.

Hospital Cottages for Children: A new building, to accommodate 50 patients, provided for in chapter 86, Resolves of 1900.

Westborough Hospital: Two buildings, each to accommodate 35 patients, provided for in section 2, chapter 471, Acts of 1901.

Asylum for Insane Criminals. — A building for 25 nurses, provided for in section 2, chapter 471, Acts of 1901.

Aug. 14, 1901. — Taunton Hospital: A nurses' home, provided for in section 2, chapter 471, Acts of 1901.

A license to receive insane persons for care and treatment in the New England Sanitarium and Benevolent Association at South Lancaster, Mass., has been granted by the Governor and Council, on the recommendation of the Board.

According to the provisions of section 11, chapter 87 of the Revised Laws, namely, "The board and the boards of trustees of the state institutions under its supervision, or their representatives, shall meet semi-annually for consultation and harmonious action," conferences with the trustees were held on Dec. 19, 1900, and June 25, 1901. The subjects for discussion were:—

Dec. 19, 1900. — The aged inmates of our insane hospitals and asylums, or any inmates who may be considered unsuitable for such care; number, classes and special needs of such; classes of such suitable for care in institutions for the insane; means of preventing commitment of unsuitable cases; should further provision be made for the care of the aged in existing institutions; is there need of an independent State institution for old people?

June 25, 1901.—Indoor occupation of the insane in making brushes, mattresses, clothing, etc.: is it a help or a hindrance to recovery; kinds of such occupation now pursued or suitable for introduction into your institution; number, percentage, and class of patients so employed; rules as to outdoor exercise, hours, supervision, etc.; should such employment be largely restricted to cold weather; can it be made more than self supporting?

The arrangement of details for future conferences has been delegated to standing committees appointed by the State Board and by the executive committee of the Trustees' Association. The conferences will be held semi-annually, at the State House, on the third Tuesday of November and May, at 10.30 A.M.

## Public Institutions.

The general administration of the different institutions has been good in the main, and is commended by the Board.

Unusual activity in making structural additions and improvements has been apparent during the year, owing to the

large appropriations made for this purpose by the last Legislature. These provide for the erection of four nurses' homes, one infirmary and four buildings for working patients, affording accommodations for 435 persons, at an average per capita cost of \$641.38. The total sum appropriated for these purposes and for improvements and repairs amounted to \$397,550, distributed among the institutions, as shown in the tabulation on pages 45–47.

# Worcester Hospital.

The chapel wing extension, described in our last year's report (pages 56 and 57), has been completed, and will be occupied as soon as the necessary furniture can be provided. The chapel itself has been enlarged by moving back the stage 20 feet into the new wing; it has also been repainted and frescoed.

Extensive alterations have been made in the laundry, affording additional space for new machinery. A new drying room has been installed, of fire-proof construction,—an eminently wise precaution against fire, inasmuch as most of the fires in institutions of this character originate here.

The roof of the boiler room and coal shed has been raised, providing much-needed room for mechanical departments. This work has been done for the most part under the supervision of the hospital corps of mechanics, largely by patients' labor, and has been paid for out of the current income of the hospital.

Steady progress has been made, as in previous years, in advancing the standard of medical and scientific work under the supervision of the medical director, who describes the results of the year's investigations in the following extracts from his report to the trustees:—

The fifth year of the present organization of the medical work has brought an increase of labor both on the clinical side and on the side of the post-mortem investigation. Considering further the extension of the scope of the work laid out as a routine in each case, we find ourselves before a much greater output of work than in the previous years.

The number of admissions was 588, that of discharges 580, and

the total of careful records is thus brought near the number of 2,500. The autopsies reached the number of 80, *i.e.*, 60 per cent. of the deaths, as in previous years.

With four senior and four junior assistants on the clinical side and one assistant on the autopsy work, practically all the time and energy at our disposal have been taken up with the routine, and the general result has been that the work done is decidedly of greater permanent usefulness than in the previous years. The chief improvements are: (1) in the greater accuracy of the clinical records and greater clearness in their arrangement; (2) the greater number of examinations for special features of the urine, of the blood and the gastric contents; and (3) a much more uniform and reliable material from the autopsies.

The chief results are that a much more definite attitude has been reached concerning the interpretation of many phenomena. In the field of pathological anatomy an important result has been reached concerning some findings of the character of a parenchymatous degeneration of systems of nerve fibres and of cell-types in certain forms of melancholia, of alcoholic-senile processes, etc., presented to Boston Medico-Psychological Society and published in "Brain." The principal result is that the anatomical condition is far more extensive than had been supposed by Turner, Worcester and others who had come across it since my first publication in 1897, and that Turner forced the facts when he thought he had found in the condition an explanation for both melancholia The degeneration is found in many parts which are not supposed to have anything to do with the mental symptoms, and this leads us to insist upon an important practical hint at variance with the recommendations of the leading German students in this field, viz.: their claim that the pathological anatomy of mental diseases is to be sought in the cerebral cortex. Our findings and the hasty conclusions of Turner together show that the day has not come when restriction of work on too narrow parts of the nervous system will not lead, of necessity, to narrow and easily wrong views.

The studies on special cell-types have been continued, but they have been withheld from publication because a number of points require clearing up, and because it is not desirable that the literature should be swelled with simple descriptions before sufficiently useful explanations can accompany them. A summary of the principal facts is now in preparation for an article on the general pathology of insanity for the "American Reference Handbook of Medical Science."

In the studies of the blood, as in the other lines, much of the results tend to invalidate hasty claims of the existing literature; and a certain attitude of distrust which was entertained concerning the curious wave of "blood work" in previous reports can hardly be said to have been dispelled. Some interesting studies have been carried further by Dr. Hoch on the blood changes in a case of episodic epileptic insanity. They will be published in connection with some allied material.

An interesting study has been made on the question of excretion of indican in various types and stages of mental disorders, by Dr. Coriat. His contribution will soon be in shape for publication.

A leave of absence granted me made it possible to see some of the leading research stations in Europe, to attend several important European conventions, and to add to the foundation for some topics of clinical research by work in various clinics. . . .

This is not the place to enter upon the details of investigations and their possible influence on our own plans of work. Everywhere, also in the congress at Berlin, one sees strong efforts towards getting more solid foundations in clinical psychiatry. It is striking how everywhere the laboratory work is given the position of an adjunct, not of the centre, as is unfortunately the tendency in Anglo-Saxon countries. In this direction Edinburgh is likely to take the first step towards the construction of hospital wards for the central institute of psychiatry.

On the feelings concerning our own work here the whole review of European efforts has had the effect of a wholesome corroboration of the intentions with which we started out in this hospital, and the only regret is that they had to be adapted to such a large material.

## Taunton Hospital.

Malaria has been less prevalent, in the ratio of 86 cases this year, compared with 184 last year. The disease seems to be slowly abating in the city as well as in the hospital.

The clinical study of patients, case taking and pathological work are under the supervision of a special assistant. His time has been largely taken up during the year with the clinical study of patients, which has allowed little attention to be paid to research work in the laboratory. Twenty-six autopsies have been performed.

The attempt is made in this hospital, as in most of the others, to bring the acute cases together in wards separate

from the chronic, and to establish a hospital régime, so far as possible. Here it is found practicable to treat most of these, even excitable patients, in open wards, with resort to single rooms only in rare instances.

The excellent work of the training school for nurses is seen in the more intelligent and better care of the patients. Five nurses completed the prescribed course and passed satisfactory final examinations.

The erection of a home for women nurses has been begun.

About 20 working patients are living at the Raynham farm, performing much labor upon the land, and receiving great benefit, both mental and physical, from the freedom of outdoor life.

The possibilities in the occupation of patients are well illustrated at this institution. The superintendent gives, in his annual report, an interesting account of his methods and the variety of employments, as follows:—

Recognizing the fact that systematic occupation under well-regulated conditions is perhaps the most important agent we possess in hospital treatment of the insane of the chronic class, and of many who are recovering from acute attacks, constant effort has been made to find employment for all patients who are able and willing to work, and to stimulate an interest in work in those who from mistaken motives are disinclined to employment of any kind. When appealed to in the right spirit, it has been found that patients who are self-supporting are quite as inclined to work as are those who are supported at the public expense.

No difficulty has been experienced in finding suitable employment for all who are able and willing or can be persuaded to work, so various are the different places about the hospital where patients' labor can be utilized. The number of patients employed in the different departments of the hospital has been slightly increased during the past year, the percentage of men being 64; of women, 60. People not acquainted with the management and daily routine work of the hospital may be interested to learn of the various departments in which patients are employed, and for the information of such the different places are here mentioned with the number of patients employed in each. On the home farm, including the garden, barn and piggery, on an average about 30 patients are employed, and at the Raynham farm about 20; about 8 at the greenhouse and flower garden through the summer, and a less

number through the winter; 1 man has the care of the lawn in the rear of the hospital, 1 the care of the rear gate, 1 the care of the front avenue and 1 the front gate and the grounds about the entrance; 4 men are employed at the boiler house, 2 in the carpenter's shop, 2 with the painters, 2 with the masons and 1 at the stable; 1 has the care of the golf links and 1 the care of the tennis court; from 14 to 16 men are employed in the laundry, 2 in the bakery, 8 in the kitchen and basement, 2 in the storeroom and one assists the librarian and does other clerical work.

About 30 men on the average are employed in the industrial building, where several kinds of work are carried on, — making brushes, repairing furniture, upholstering, making and repairing boots, shoes and slippers and making and repairing men's clothing. The latter has been developed more during the past year, and at present a considerable number of coats, vests and trousers are being made, besides some underclothing. The patients employed in this building work in two divisions, one division in the forenoon and one in the afternoon, so that each has his forenoon or afternoon walk for exercise in the open air.

More patients are employed in these industries in the winter than in summer, when the farm is more attractive; but there are always a large number who have been educated in some mechanical employment, and prefer that to the farm work, to which they have not been accustomed.

From 16 to 18 women are employed in the laundry and about the same number in the kitchen; from 18 to 20 in the sewing-room; and nearly twice that number sew and knit on the wards under the direction and supervision of a special attendant who has the care of the work. Many of the women work for themselves a part of the day, sewing or doing fancy work, as they are required to work for the hospital only half a day. A large number of patients, both men and women, assist in ward work, which gives employment for several hours a day.

Patients are employed at various times in the year in extra work about the place, not herein specified, especially when new buildings are being erected. During the present year about 20 men were employed for several weeks in excavating the basement of the nurses' home and digging the trenches for the water and gas pipes. Later, considerable grading will be done. When the regular farm work is slack, those who work on the farm have been employed in clearing up the stumps and underbrush in the pasture, much work of this kind having been done within a few years.

But little success can be attained in creating or developing a

public sentiment for work among patients in a hospital if those who refuse to work are allowed to associate with those who are willing to work; and for this reason I regard working wards, where all the workers are brought together, as necessary for a successful development of the working spirit. In these wards public sentiment is all in one direction, and has the forceful influence which unanimity of sentiment always brings to any cause. On the men's side of the house it has been found necessary to increase the number of working wards, and we now have three; and on the woman's side two are found hardly sufficient.

## Northampton Hospital.

There have been fewer cases of malaria than last year, probably owing to the exclusion of flies and mosquitoes by fitting fine screens to the windows. Typhoid fever, which was epidemic last year, has appeared in only four cases.

In February a waitress in the superintendent's dining room came down with diphtheria, having contracted the disease from some unknown source. Fourteen other cases followed, only one patient being affected. The vigorous use of antitoxine and careful isolation controlled the spread of the disease. There were no deaths, and only the first two patients were seriously ill.

No special assistant physician has been appointed to direct the medical and scientific work of the hospital. The superintendent believes that this should be an important part of the duties of each medical man. Much laboratory work has been done, in addition to routine examinations of the blood, urine, etc. Chemical and microscopical examinations of the contents of the stomach have been made as occasion required. The superintendent thinks such measures of value to the patients who persistently refuse to eat, inasmuch as delusions of poisoning often originate in the faulty action of the digestive organs. It is found that the delusions disappear with the correction of such condition.

As in former years, extensive use has been made of the wet pack, with gratifying results in promoting quiet, inducing sleep and improving nutrition.

Nine autopsies have been performed during the year.

The training school for nurses is showing good results in the increased attention and more intelligent care of sick and feeble patients.

No patient has been secluded in a room or mechanically restrained for several years.

The new horse stable begun last year has been completed, and is now in use. This allowed the old stable to be remodelled into a cold storage building. The trustees, in their annual report, describe this and other improvements as follows:—

The old flooring and timbers were removed and the cellar was excavated to a depth of three feet, new sand being filled in and a cement floor laid. New floors were built, dividing the building into three stories. The basement will be for the storage of potatoes. The ground floor is divided into rooms for various uses. In one room eggs will be stored, it being large enough for two car loads. For two years we have had eggs in cold storage in Boston, and our experience warrants us to expect a material economy in This present year we used 14,000 dozen of this one item alone. eggs, and will probably use more in the year to come. Another room of the house is for the storage of butter, being large enough for a year's supply. In a third room will be stored barrelled meats, corned beef, hams, etc. One room is for fresh meats, and the room adjoining is a cutting room. On the second floor apples will be stored, and on the upper floor, which is not properly a part of the cold storage system, will be kept sugar, flour and bulky An elevator runs from the basement to the upper floor. supplies.

The refrigerating machine is a twelve-ton absorption machine, made by the Isbell-Porter Company of Newark, N. J. In this process, brine made of calcium chloride is cooled in the refrigerating machine, and is then pumped through coils of pipe in each of the storage rooms. The desired temperature in the different rooms is secured and regulated by the length of pipe through which the brine is allowed to circulate, each coil of pipe being controlled by valves.

With the exception of setting up the refrigerating machine, the work has been done by our regular force of employees, with the help of patients. The carpenter work has been done by patients working with our carpenter. Nearly one hundred thousand feet of spruce sheathing has been laid, and it is gratifying to say that the patients did their part very intelligently. They apparently en-

joyed the work, and were much improved by it. The machinery is nearly ready to be tested, and the building will be put to use very soon.

In December, 1900, our electric service was increased by the addition of a 37½ K. W. generator, made by the Westinghouse Electric Company. This is operated by a direct connected Ames engine. Both machines work smoothly, and are very efficient. Since they were installed there has been a continuous electric service during the twenty-four hours of each day.

Since the original electric plant was installed the extension of its use has been constant. For several years the laundry flat irons have been heated by it, water has been pumped from the spring, and a motor has been in use at the barn.

We have purchased a 10 horse-power motor to operate the machinery in the carpenter shop, and another to run the milk separator and the ice cream freezer. As soon as possible we shall purchase one to run the laundry machinery and another for the engineer's shop, and thus be able to do away with the belting, which not only is noisy but requires several horse-power to operate.

The new generator is of a little greater capacity than the old one. It is probable that in a few years, because of new buildings to light and other extensions of the use of electricity, a larger machine, similar to the one just installed, will be required to replace the older one of the two now in use.

A telephone system of thirty stations has been put in, and found to be a saving of time and labor.

# Danvers Hospital.

The general health of patients has been very good. Two nurses have had diphtheria and one typhoid fever, and all recovered. With regard to the prevalence and danger of tuberculosis the superintendent justly says, in his annual report:—

The presence upon our wards of cases of active tuberculosis still continues to jeopardize the hygienic conditions of the hospital, and I again call attention to it as a matter for consideration. It is a problem not easy to solve, yet one which daily appeals to the conscientiousness of any one who studies the conditions, and the more crowded our hospital becomes the more forcibly does the evil present itself. I have not any specific recommendation to make, in this report, upon this subject; but I

believe it is one which calls for general discussion and exchange of views as to how the tuberculous insane can be provided for so as to give them proper care, and at the same time protect the non-tubercular patients from danger of contagion. We have made a small beginning this season on the out-door plan of treatment, by placing three tubercular patients out of doors in a tent, and we anticipate carrying this method further another year.

On account of the death of the special pathologist, the pathological and laboratory work has been restricted during the latter part of the year. However, forty-three autopsies have been made, together with systematic microscopical examinations of the brain and other organs. It is to be regretted that the right to perform a post-mortem examination is denied so often by the friends of deceased patients. Upon the scantiness of such material the superintendent comments as follows:—

The amount of clinical material of this hospital, in the field of both mental and bodily diseases, is great; and it goes without saying that there are no means by which clinical facts can be illuminated as by post-mortem examinations. Yet this hospital, as well as other insane hospitals of the State, supported at the public expense, maintaining thoroughly equipped laboratories and employing salaried pathologists for the very purpose of lending progress to medical knowledge, have only a limited opportunity of examining the bodies of the dead. I believe there should be a law sufficiently broad in its application to allow the physicians of our public institutions to examine, where it seems desirable to do so, the bodies of all persons dying in such institutions who have been supported at the public expense.

The medical staff have published during the year papers entitled "The new formation of nerve cells in a cerebral tumor, — neuroglioma," and "Cerebral hemiatrophy in an adult, with hemiplegia and aphasia."

On the morning of July 18 a fire broke out in the drying room of the old laundry. Inasmuch as this was located in the centre building, beneath the large congregate dining room, serious damage was threatened for a time, but by prompt action the fire was extinguished within an hour, with a loss not exceeding \$500. The fact that this is the second fire originating in the drying room at this institution within two years emphasizes the necessity of fire-proof construction of such provision, and the advisability of erecting separate, detached buildings for laundry purposes. Fortunately, the new laundry building was nearly ready for occupancy, so that no serious inconvenience resulted.

Work has been begun and is progressing satisfactorily upon the new surgical operating building, the farmhouse for working patients and the repair of greenhouses. Two Kirker Bender fire-escapes have been placed upon the rear of the centre building. A large force of men has been busy in pointing the outside brick work of the main building, renewing woodwork, sashes and sun rooms, and painting the whole exterior, but will not be able to complete the work this year. Other extensive repairs and alterations have been necessary, and have been made during the year out of the current income of the hospital.

## Westborough Hospital.

In the early part of the year typhoid fever developed. Seven employees and seven patients were affected, but all recovered. Its cause was not manifest, but the State Board of Health is of the opinion that the water of Lake Chauncy was the probable source of infection. A new supply of drinking water will be provided from driven wells, but is not expected to be permanently satisfactory. Meantime, only water which has been boiled is used.

In describing the treatment of patients the superintendent says:—

The object for which the hospital is maintained, the curative treatment of the insane, has been faithfully carried out in the year just now ending. All cases admitted are given medical treatment for their mental condition, which is continued so long as there is any hope of recovery or improvement. Prolonged rest in bed has aided in many of both the excited and depressed cases, and gratification must be expressed with the benefit of thyroid feeding, which each year affords assistance in restoring some who appear to be drifting into chronic dementia. For the

chronic insane I know that employment makes them both happier and better in every way. The examinations and investigations of the pathologist become more valuable each year, and enable the assistant physicians to make more promptly a correct diagnosis in many cases.

The pathologist has been busily employed during the year, as is evidenced by his statement of the work accomplished, namely:—

As in the three years previous, the work has been of a clinical nature, its volume larger, and its value to the medical service, I believe, proportionally greater. While the facilities for doing the work have been improved during the year by the addition of muchneeded apparatus, the rather cramped quarters of the laboratory seriously inconvenience the performance of the best work, and are altogether inadequate for the proper storing of material which accumulates from year to year.

There has been one publication during the year based upon work done in the laboratory, namely, "Four cases of pernicious anæmia in insane subjects, with a consideration of the coexisting nervous features of the disease."

In the early part of the year bacteriological examinations of the drinking water were made, to determine if it contained the typhoid The investigation was begun to seek the source of infection in seven cases of typhoid fever, which developed in the latter part of the year previous and were continued over into the present year. The result was negative. This negative result was confirmed by simultaneous investigation of water from the same source, conducted in the laboratory of the Massachusetts State Board of Health. Four male attendants and three female employees contracted the disease, and seven female patients, one of whom was probably infected at the time of admission. Two cases also developed in the family of one of the employees, - one of these last was contracted at the dam of the Clinton water works. All of the cases gave the diazo reaction in the first week. All responded to the Widal test not later than the sixth day, save one, and in this case (a girl of nine years) the reaction was absent throughout the disease, repeated examinations having been made. In four cases examined, including the one in which the Widal test was negative, the typhoid bacillus was recovered from the feces. Attempts to cultivate the typhoid bacillus from the urine were unsuccessful in all of the cases, although albumen and casts in quantity were present in eight of the cases.

Exclusive of the work mentioned above, there have been 815 separate clinical examinations, including urinalyses, blood examinations, sputum, stomach contents, feces, tissues for diagnosis, tissues from operations, bacteriological cultures from erysipelatous eruptions, abscesses, sore throats, infected wounds and from operated cases.

There have been 461 urinalyses during the year. Of this number, 29 showed albumen alone, 56 albumen and casts and 111 easts alone. Sugar was demonstrated 6 times. Three of these were true diabetics, and in the other 3 the sugar was small in quantity and of a very transitory nature, being only observed on admission of the cases, which were at the time very much excited. Later observations failed to demonstrate its presence, even with the phenylhydrazin test. Two hundred and nineteen of the 461 urinalyses showed an increase of indican. So large a percentage of cases showing this increase cannot, it seems to me, be ignored in considering the autotoxic nature of these cases, or, at least, an importance must be attached to this concomitant symptom in questions bearing on etiology and treatment of them.

The blood examinations made during the year (168) makes 700 the total number of individuals examined in four years. These do not include examinations like the Widal test or simple staining for the malarial organisms, but only those examinations in which the hæmoglobin was estimated, counts of erythrocytes and leucocytes and differential counts of leucocytes were made. The examinations continue to prove their value, not only in the way of accumulating data, but also in influencing successfully the treatment of many cases which it is the object of this hospital to treat.

In addition to the above, there have been 16 autopsies during the year, — 7 males and 9 females. Complete autopsies were made wherever permission was granted.

The dining room of ward 7 has been enlarged and greatly improved.

Two new boilers, each of 125 horse-power, have been installed.

The Warren farm, of 127 acres, adjoining land already owned by the hospital, has been purchased. The farmhouse thereon has been renovated and enlarged, so that it provides for 35 patients. In addition, two brick cottages are being constructed. The group of three buildings will accommodate 100 patients.

# Boston Insane Hospital.

The training school for nurses, established in 1899, has graduated its first class, of eight members. The majority of the nurses in the hospital are now members of the school, and all new nurses are expected to become such.

Many repairs and improvements about the buildings have been made, especially in connection with the plumbing and the heating and electric lighting plants.

Twenty-four acres of land, lying between the men's and women's departments, have been purchased, so that the two groups are now connected by land owned by the hospital.

Plans and specifications for two new wards are being prepared.

# Worcester Asylum.

The general health of the patients has been excellent. One of the women nurses contracted typhoid fever from some source outside the institution; no other cases developed.

The school for nurses is proving a useful auxiliary to the medical service. One of the nurses pursued a supplementary course at the Memorial Hospital.

The ventilation of the wards has been improved by the use of electric fans wherever the inflow of fresh air was insufficient or the outflowing current sluggish.

The electric lighting system has been extended, and much inside painting and miscellaneous repairs of considerable extent have been done.

A congregate dining room, sufficient to accommodate all the women nurses and patients, has been provided in the basement, which is practically above ground on two sides. This will allow the space on the wards formerly occupied by the dining rooms to be converted into dormitories for some 40 patients.

This institution is located in the midst of the city of Worcester. It has no farm for the occupation of its men patients, and the acreage of the State's property is so small

that no considerable expansion is possible unless additional territory is acquired. Relative to such expansion, the trustees say in their report:—

If the State Board of Insanity, in performing its duty of providing for the increase in numbers of the insane, should desire to formulate a plan for earing for a greater number of patients in connection with this institution, the trustees would be glad to be heard upon that question.

The Board has conferred with the trustees, and both are agreed that it is desirable to acquire additional land within an accessible distance, and to gradually extend provision for the class of patients which it has been customary to transfer from the hospitals to this asylum; and to apply, in such expansion, the principles, so far as practicable, of a farm colony.

# . Medfield Asylum.

The daily average number of patients has been 1,234.04, although the buildings were intended to accommodate only 1,000 patients. Owing to the greater overcrowding in the State hospitals, it is probable that this number will gradually increase for the present.

However, the general health of the patients has been good, and the death rate lower than in the other institutions, except the Asylum for Insane Criminals.

The farmhouse has been completed, and will be occupied immediately. It accommodates 30 men patients in two dormitories, in one-story wings to a two-story centre building, which provides for 14 farm employees and the farm superintendent and his family. In the basement are located the kitchen and dining room, and a smoking room, rain bath, clothes room and toilet facilities for patients. It is heated with low-pressure steam and lighted by electricity. Its location near the barns will bring the patients nearer their work, and will save considerable time and inconvenience.

The superintendent reports that the following improvements about the buildings and grounds have been completed:—

Basements of four ward buildings have been concreted. Considerable grading has been done between the buildings on the east side, and a road has been built back of them about one-half mile in extent on the north and east sides. Eighty-five iron screens have been placed upon the basement windows of F-2. One hundred and twenty-five apple trees, twelve elms and eight maples, eight hundred raspberry and blackberry canes and twenty-five shrubs have been set out. During the winter the hot-air ducts in the basements of the buildings connecting the rooms with the hotair chamber have been covered with Cabot sheathing quilt. This covering is cheap material, but it has been found quite effective in preventing radiation of heat from these ducts, consequently saving considerable heat. A tunnel of masonry six feet wide and seven feet high has been built between the power house and the kitchen; all the steam mains and hot-water pipes go through this, and then branch under the kitchen to supply the various buildings of the institution. Heretofore when a leak has occurred it has required taking up the street; this improvement makes this no longer necessary. The boilers have been reset and new valves used. At the same time two new windows were broken through the wall of the power house, to give more light at the rear of the boilers. iron water tower has been scraped inside, and two coats of paint given it outside and in; new stay bolts have also been put in, and this is now in thorough repair. At the pumping station the boiler has been retubed, and a Penberthy injector put in to see if the water from the big spring upon the hill would cause less pitting of the tubes than the present water supply. An electric watch clock has been installed. Twelve hundred feet in length of new cement walk six feet wide, laid upon a foundation of small stones four feet thick, has been completed on the east side; considerable grading has been done in connection with this. Work on the sewer bed has been continued during the summer; it has been subject to many interruptions, and, while little progress has been made, yet it has been of great benefit to the patients. Many of the patients employed upon this have been of the disturbed class, and the improvement mentally and physically is very noticeable.

# Asylum Wards, State Hospital.

Many paupers suffering from mental derangement are admitted each year. When the existence of insanity has been determined by examination by one of the medical officers of the institution and by a medical officer of the

State Board, such patient is transferred from the house to the insane department, and classified as insane. Such transfers this year number 91, — 56 men, 35 women. Inasmuch as provision and equipment for obstetrical work are superior here to such facilities in State insane hospitals, the practice has grown up of transferring thither pregnant women patients from the latter institutions. In these ways a considerable number of insane patients of the acute class are brought here for treatment.

It therefore becomes important to have suitable buildings, properly equipped, for such work. This need is being met for men patients by the new hospital building now in process of construction. An appropriation for the erection of such a building for women patients is asked of the Legislature this year.

During the epidemic of typhoid fever, eleven insane patients were affected, resulting in one death. The epidemic was caused by contamination of drinking water by sewage from the institution, which is used for irrigation of the sandy soil in the neighboring fields. Regarding the inadequacy of such disposal under present conditions the superintendent says:—

Our sewerage system, which was practical when it was established, ten or more years ago, has become inadequate, owing to the increased number of buildings and sanitary sections. The overflow from the sewage basins is greater than can be absorbed by the system of irrigation of the surrounding land, especially during very wet seasons, when the land is full of water; and also in winter, when the ground is frozen, it overflows the usual bounds and contaminates the brook. The State Board of Health has advised us to establish a new system for sewage disposal, and I believe that this should be attended to as soon as possible.

# Asylum for Insane Criminals, State Farm.

The general health of the patients has been good. There has been no illness from contagious disease other than tuberculosis. The death rate is 4.2 per cent. of the total number of persons treated, — the lowest in any of the hospitals or asylums.

In reviewing the different classes of patients received, the superintendent says:—

We received 17 cases from the State Prison as against 10 cases the previous year; and only 4 cases from the State Reformatory, as against 16 cases the year before. Exactly the same number of cases (19) were received from the several houses of correction as the previous year, and 12 more cases from the prison department of the State Farm. As might be expected, our most hopeful cases have in the past come from the reformatory. As a rule, these cases have been younger, and more acute as to duration of insanity. Our least hopeful cases, as a rule, have been those committed from the prison department of the State Farm. For this there are several reasons. Most of these are chronic, demented cases, many of whom were tramping aimlessly about the State until arrested for vagrancy. Some are younger men, with a previous history written in the case books of other hospitals for the insane. Occasionally a beginning case of paresis or a respectable old man, who has wandered away from home through mental weakness, receives a sentence. If too restless, noisy or dangerous to be cared for in the general hospital department, they find their way, by due process of law, to the asylum. . . .

It is a significant fact that every one of the 36 cases committed from the prison department of the State Farm had been sentenced as a tramp, or for vagrancy, and that every one of these men was demented, or suffering from chronic insanity, at the time of his sentence. When we consider the additional fact that 358 men were sentenced to the State Farm during the year as tramps, or for vagrancy, -10 per cent. of whom were insane, - while there were more than 1,100 men received during the same year for drunkenness, and remember that not one of the 1,100 drunk cases became insane enough to be committed to the asylum department, we get an idea of how unpromising these cases are as to recovery, and how unlikely to become helpful workers. It is certainly a menace to society for these defective ones to be roaming aimlessly about the State. Some have dangerous forms of delusions, and their aversion to work of all kinds is in marked contrast to the patient who has been a useful citizen. The latter, as a rule, asks to work, and is most unhappy under enforced idleness. Somewhat more than 50 per cent. of our patients work each day, and we expect more will be able and willing to work on the farm in season when the land is ready which is now being enclosed for the out-door employment of our asylum patients.

A new dining room has been constructed by tearing out partitions and renovating the ground floor of the west wing. Its dimensions are 50 by 40 feet, and its seating capacity 130. There are now three congregate dining rooms, which allow a very satisfactory classification of patients.

Between this and the main dining room a one-story addition has been erected, providing a much-needed new kitchen, 44 by 42 feet. Heretofore nearly all the cooking for the insane department has been done in the main kitchen, which served the whole institution. The kitchen is well equipped, and will be of great advantage in meeting the special needs of the insane, which are different from those of the prison department.

Hospital for Epileptics.

The general statistics for the year are as follows:—

						Insane.	Sane.	Total.
Patients in house Oct. 1, 1900, .						142	101	243
Admitted within the year, .						29	65	94
Whole number of cases within the	e yea	ar,				171	166	337
Discharged within the year, .					•	10	40	50
as much improved,						-	3	3
as improved,						5	19	24
as not improved, .						3	8	11
on visit,				.`		2	10	12
Died,						11	6	17
Patients remaining Sept. 30, 1901,						150	120	270
Viz.: supported as State patien	ts,					40	30	70
as town patien	ts,					107	76	183
as private patie	ents,				٠.	3	14	17
Daily average number of patients	, .					150.72	110.68	261.40

Experience here shows that the epileptic needs comparatively little medicine. Static electricity is used to advantage. The trustees lay special emphasis upon the importance of systematic occupation or work in the general care and treatment of the epileptic. The latter receives not only the actual physical benefit of the work, but a resulting mental training and discipline which contribute to greater powers of self-control.

The great majority of epileptics have never been accus-

tomed to work; on the contrary, they have been taught that they are invalids, and will be harmed by work. It is therefore an up-hill task to persuade them to take up any occupation, and especially to pursue it with regularity. Much effort has been made to keep the patients busy, although the amount of useful work done is oftentimes very small.

An average of 18 of the younger patients have attended school. The studies are arithmetic, geography, writing and spelling, history, reading, drawing on blackboards, etc. The facts learned are soon forgotten, and great patience in repetition is required of the teacher, but on the whole the schools seem to be of advantage.

The training school for nurses has now been established two years, and has graduated its first class of five nurses.

Four new buildings for patients and the dining room building, described in our last report, are nearing completion, and will be occupied about the first of January. The Northrup farm, of 120 acres, which adjoins the State's property on the west, has been acquired. The old farmhouse now accommodates about 20 working patients. The foundation for the new laundry building has been laid, and work is beginning upon the superstructure.

# Hospital for Dipsomaniacs and Inebriates.

The general statistics for the year are as fo	llo	ws:	_
Persons in hospital Oct. 1, 1900,			258
Admissions within the year,			462
By commitment,		391	
By return from leave of absence of previous years,

Supported as town patients,		. 95	
Supported as private patients,	•	. 6	
Number of different persons within the year,			720
Persons committed,			391
Daily average number of patients,			243.36+

Of the 324 patients discharged during the year ending May 6, 1901, 117, or 36.11 per cent., were wholly abstinent when their habits were investigated between July 6 and Oct. 1, 1901; 36, or 11.11 per cent., were improved or drinking less than before admission; and 129, or 39.81 per cent., were drinking as before; 36, or 11.11 per cent., could not be found; and 6, or 1.85 per cent., had died.

For several years there has been steady improvement in the class of patients committed to the hospital, and this will undoubtedly continue, as the purposes for which it was established become better understood.

We note that the trustees have discharged during the year a larger number of patients who were not to be benefited by further treatment; namely, 93 this year, against 41 last year. Such a course is to be commended, and should be vigorously pursued until the institution is established on a curative basis, so far as practicable.

The amount of useful work performed by patients is progressively increasing. During the past year as many patients as possible have been assigned work on the farm and about the grounds, in order that they might be out of doors as much as possible. The broom shop was closed during the summer. The non-parole patients were sent out to work upon the farm, in charge of an attendant. The patients are expected to work five hours each day. It is earnestly to be desired and hoped that each patient, according to his strength and physical condition as determined by a physician, will eventually have his day occupied fully and for the usual number of hours which constitute a day's labor.

This year, as in the two years preceding, there has been noticeable improvement in the general administration of the hospital. The housekeeping is now excellent, and the buildings are clean, orderly and in good repair.

The weekly per capita cost was \$4.53 this year, against \$4.67 last year. So high a rate of maintenance is due in part to the small size of the institution. It may be reduced by increasing the amount of useful labor performed by patients and by effecting certain economies of administration which are permissible without lowering the standard of efficiency.

School for the Feeble-minded.

The general statistics for the year are as follows:—

								Males.	Females.	Totals.
Number present Sept. 30,	1900	),						412	268	680

Applications for admission	n du	ring	yea	ır,				_	~	256

During the past ten years 2,219 applications for admission have been made, of which only 914 have been granted. Eighty per cent. of the applicants lived in the metropolitan district.

In order to meet the very urgent demand for additional provision, the trustees propose to gradually enlarge the institution at Waltham to accommodate 1,000 inmates, or about 400 more than the present capacity. They estimate that this can be done at an average per capita cost of about \$600.

Such extension would provide for school children and the custodial and infirmary classes, while the Templeton colony would be gradually developed to take care of the adult,

able-bodied class. As before stated, the Board heartily approves of such extension.

In describing the progress of the year at the Templeton colony, the superintendent says:—

We have had a very satisfactory year at our farm colony at Templeton. The first group of 50 boys and the employees who live with them and care for them moved from their temporary camp into the renovated farm house and the adjoining new dormitories at the beginning of the new year. These buildings as arranged provide most comfortable and homelike accommodations, and have proved entirely satisfactory in winter and in summer. The boys were kept busy during the winter cutting and teaming firewood, storing ice and hauling lumber, stone, sand, etc., for future build-Since spring opened they have been very busy ing operations. grading, excavating basements, water trenches, sewers, etc. construction work done by these boys, if done by hired workmen, would have cost us a sum equal to the entire cost of their maintenance for the year. The boys have enjoyed the most robust health, and have been thoroughly happy and contented; indeed, there has been a noticeable improvement in the mental condition of our "colonists;" nearly every boy has become appreciably more intelligent, capable and self-reliant.

The third group of buildings, located near the centre of the estate, to consist, like the other two, of one of the original farm houses with near-by new dormitories, toilet rooms, etc., to accommodate 50 inmates, is now under construction, and will be roofed in before winter and ready for occupancy early in the coming summer. The lumber, brick, etc., for these buildings have been paid for and delivered on the ground. The new steam laundry for the colony is in successful operation.

The buildings now completed and the other improvements have been constructed at an expense well within our approximate estimates. The appropriation of 1898 for building, etc., for the colony was \$50,000; we have expended to date \$26,707.09, leaving a balance of \$23,292.91. This sum will be sufficient to complete the sewerage plants for the three groups of buildings, to put in a permanent water supply, to build a house for the superintendent,—in fact, to do all the work contemplated in the original plan and estimate. We cannot economically complete all of this work during the present year. The unexpended balance of the appropriation will lapse unless reappropriated by the Legislature.

#### Hospital Cottages for Children.

The general statistics for the year are as follows: —

Patients in house Oct. 1, 1900, .					130
Admitted within the year,					68
Whole number of cases within the year	r,				198
Discharged within the year,					63
as recovered,					5
as much improved, .					20
as improved,					17
as not improved,					13
Died,				•	8
Patients remaining Sept. 30, 1901,.					135
Viz.: supported as State patients,			•		30
as town patients,					40
as private patients,					65
Daily average number of patients,					130
The largest number on any one day,					136
The smallest number on any one day,					122
Number of in-cases from opening of h	ospit	al,			860

This is a private institution, which has received from time to time aid from the State, chiefly for the erection of buildings. In consideration of this, it cares for a considerable number of public charges; namely, at the end of the year, 30 patients supported by the State and 40 patients supported by cities and towns, at the established rate of \$3.25 per week, although the average per capita cost of maintenance for all inmates was \$4.02.

It receives children suffering from nervous disorders (not feeble-minded), with deformities, disease of the hip, knee and other joints, spinal disease, infantile paralysis, and other affections where the disorder is likely to require long residence in a hospital; also cases where operation or fitting of supports is necessary. In the latter cases the children are returned to their homes as soon as the appliances are well fitted, usually in a few days, and are brought to the hospital at short intervals for observation.

About 75 per cent. of its patients are epileptics. The present practice is to send epileptic children under fourteen years of age to this hospital. However, it sometimes happens that such children cannot be received or cared for here,

and the State authorities are somewhat embarrassed to dispose of them, inasmuch as no epileptic under fourteen years of age can be received at the Hospital for Epileptics.

The new building, authorized by chapter 86, Resolves of 1900, is in process of construction, and nearly completed on the exterior. Improvements in the boiler house and dynamo room have been made, and the heating system renovated. The alterations and improvements in the administration building are necessarily delayed until the new building can be occupied.

One hundred acres of land have been purchased this year, from private funds, which bring the acreage of the farm up to about 300.

#### GENERAL STATISTICS.

The general statistics for the year and other data relative to admissions and discharges of the insane are shown in the following tabulations:—

General Statistics for Public Hospitals.

#### PRIVATE INSTITUTIONS.

# McLean Hospital.

This is a private hospital for the insane, a department of the Massachusetts General Hospital.

Its capacity is rated at 160 patients. The admissions exceeded the number of any year in the history of the new hospital at Waverley, reaching a total of 165 persons, of whom 105 were considered recent cases and 60 chronic or incurable.

The admissions constitute 102.68 per cent. of the daily average number of patients resident, as compared with 47.49 per cent. for the six public hospitals for the insane; the discharges, 94.17 per cent., as compared with 43.06 per cent.; showing a movement of patient population more than twice as rapid as in the public hospitals, and a proportionately larger amount of hospital, in distinction from custodial, work.

The voluntary cases were one-half of all admissions. In the last twenty years 850 voluntary patients have been received, as follows: 1881, 1; 1882, 11; 1883, 33; 1884, 49; 1885, 34; 1886, 29; 1887, 29; 1888, 34; 1889, 41; 1890, 58; 1891, 40; 1892, 52; 1893, 46; 1894, 40; 1895, 39; 1896, 48; 1897, 61; 1898, 61; 1899, 60; 1900, 84.

The superintendent states: -

The development of the plan and purpose of the new hospital has now reached a stage which permits an extension of its benefits. Some parts of the hospital are now overcrowded, and the proper remedy for this by providing more room would also improve the classification. Our greatest present need in this regard is a new building for about 30 women. . . . A considerable number of patients in conditions of active senile insanity are being confided to the care of the hospital, where the facilities for treatment are better than can be had at their homes. It is not uncommon that distressing and apparently hopeless cases are relieved and restored to their homes in comparative comfort. The practice of bringing patients here for first care and observation is continuing in an increasing degree. These practical results are proving, in many

ways, that the function of such an institution includes a wider range of cases than those which can be regarded strictly as "acute and curable."

The training school, in the nineteen years of its existence, has graduated 383 nurses, — 250 women and 133 men. Of the 133 men, 55 are engaged in nursing, and 36 are physicians, medical students or dentists; of the 250 women, 151 are occupied as nurses, 21 are at home and likely to resume professional work, 3 have studied medicine and 64 are married. Thus it appears that a large proportion of the graduates continue to make use of the training received in school.

The general statistics for the year ending Sept. 30, 1901, are as follows:—

#### A. - Insane: -Patients in house Oct. 1, 1900, . . . 175 Admitted within the year, . . . 146 Whole number of cases within the year, . 321 Discharged within the year, 120 as recovered, . 45 as much improved, . 19 as improved, . . 31 as not improved, . 25 24 Patients remaining Sept. 30, 1901, . 177 Viz.: supported as private patients, 177 Daily average number of patients, . . . 164.81 B. - Patients (not insane) remaining Sept. 30, 1901, .

Other statistics relative to admissions and discharges are based upon the annual report of the hospital for the year ending Dec. 31, 1900, namely:—

# Admissions of the Insane.

There are also three patients outside the State, viz.: Dexter, N. H., 1; Providence, R. I., 2.

The 117 patients remaining Sept. 30, 1901, were in 72 families. Six families had 4 patients each; nine families, 3; nine families, 2; and forty-eight families, 1. In the last class 9 were with friends, of whom 2 were self-supporting.

### REMOVALS AND TRANSFERS.

The Board is authorized to transfer patients from one institution under its supervision to another, and from the Lyman and Industrial Schools to the Massachusetts School for the Feeble-minded and the Hospital Cottages for Children; and also to send insane pauper inmates to any State or place where they belong, when the public interest or the necessities of the inmates require. The following tables show such removals and transfers during the year:—

### CITY AND TOWN ALMSHOUSES.

The duty of inspecting and reporting upon the condition and management of city and town almshouses, as pauper institutions, devolves upon the State Board of Charity by act of the Legislature of 1900, chapter 215, namely:—

The state board of charity shall visit and inspect all almshouses maintained by the several cities and towns of the Commonwealth, and shall report annually upon their condition and management, with such suggestions and recommendations as the board may deem expedient.

However, the insane and feeble-minded inmates of such almshouses or of any receptacle for such are under the general supervision of the Board of Insanity according to section 9, chapter 433 of the Acts of 1898, namely:—

The board shall have general supervision over the state hospitals and asylums for the insane, and all other institutions and receptacles for insane or feeble-minded patients, either public or private. . . .

Furthermore, the Board, as commissioners of insanity, have authority to investigate the question of the insanity and condition of any person restrained of his liberty by reason of alleged insanity in any place within the Commonwealth, according to section 13 of the same act, namely:—

The board shall act as commissioners of insanity, with power to investigate the question of the insanity and condition of any person committed to any hospital or asylum for the insane, public or private, or restrained of his liberty by reason of alleged insanity at any place within the Commonwealth, and shall discharge any person so committed or restrained if in its opinion such person is not insane or can be cared for after such discharge without danger to others and with benefit to himself.

Finally, whenever the Board has reason to believe that any insane or other person is deprived of suitable treatment, it may make application for the commitment of such person to some institution under its supervision, according to section 14 of the same act, namely:—

... When it [the state board of insanity] has reason to believe that any insane or other person is deprived of suitable treatment it may make application for the commitment of such person to some institution under its supervision, according to the provisions of law. . . .

An agent of the Board has visited during the year every city and town almshouse and private family in which insane or feeble-minded persons have been cared for under the supervision of public authorities. Such almshouses number 213, and such private families 58. Such visits of inspection have been made during the year to the number of 241.

At the time of visitation there were found in almshouses 864 insane and 391 feeble-minded; in private families, 37 insane and 43 feeble-minded; total insane, 901; total feeble-minded, 434; total insane and feeble-minded, 1,335. Of the insane, 43 are epileptic; of the feeble-minded, 48; total insane and feeble-minded epileptics, 91.

Comparing with corresponding totals of last year, we find an increase of 56 insane, a decrease of 116 feeble-minded, — a total decrease of 60. The increase in the number of insane is largely a matter of classification. The medical visitor has found certain persons, formerly classified by a non-medical visitor as feeble-minded, who are also insane, and has transferred them to the proper class.

The Board considers that an insane person is not properly cared for in an almshouse or private family, when his mental condition is such that he requires frequent or continuous seclusion in a room, or mechanical restraint, or when he is so noisy as to disturb the other inmates, or so filthy in personal habits that his person and room cannot be kept in good sanitary condition. Sixteen such insane persons (7 men and 9 women) have been found during the year, whom the proper authorities have been requested to commit to an insane hospital, and have so acted upon the advice of the Board.

The following tables give the number and sex of the insane, feeble-minded and epileptic cared for by each town in almshouses or private families:—

The Insane and Feeble-minded in City and Town Almshouses.
